

## PRESS RELEASE

Darmstadt, the 16.01.2018  
PEAK – 180116-T01

**PEAKnx presents touch panel with high-grade finish consisting of industrial components**

### **Light + Building: new Controlmini touch panel unites elegance with reliability**

**PEAKnx, Darmstadt-based home and building automation solutions manufacturer ([www.peaknx.com](http://www.peaknx.com)), introduces a newly developed elegant touch panel for utilisation in smart homes: the Controlmini. This new device is set to make its première at this year's Light + Building in Frankfurt (Stand C71, Hall 9.1, 18–23 March 2018). Featuring a high-grade finish, the Controlmini is a fully-fledged computer containing certified industrial components. Run on Windows 10 Professional, it features direct KNX bus, USB and Ethernet connections. In conjunction with a visualisation software the Controlmini can be used in the area of room or building control, as a status and information display or as an intercom on doors.**

#### **High-performer with long service life**

The Controlmini contains a 4 GB random access memory. With full HD resolution of 1920 x 1080 pixels, its 11.6 inch LED LCD display screen is ideal for multimedia applications. On the Controlmini, integrators can install any appropriate standard visualisation software so that all room functions such as lighting, heating or blind system operation could be displayed. The touch panel has no need for breakdown-prone fan cooling – instead, a special aluminium frame structure dissipates any heat which may build up. The industrial components used in the panel are also replaceable in the long term.

#### **Suitable for any living environment**

Thanks to exchangeable glass covers with a freely selectable design, the Controlmini easily blends into any interior. The panel is also available in a surface-mount version, giving a touch of elegance at a mere 24 millimetres deep with its glass and surface mount frame. With a PEAKnx adapter the panel is compatible with Gira flush-mount switch boxes (Control 9, Infoterminal Touch). In addition to a large number of pre-configured design ideas, the PEAKnx panel designer also gives the option of creating a customised design based on personal preferences and desires.

Sponsor of Darmstadt 98

### **Pleasant to touch, easy to operate**

Thanks to its size, users can read the Controlmini's touchscreen easily from any direction. Made of glass, aluminium and stainless steel, the operating controls are extraordinarily pleasant to touch.

### **About PEAKnx**

PEAKnx is an innovative company based in Darmstadt, Germany, which manufactures home and building automation solutions ([www.peaknx.com](http://www.peaknx.com)). As the latest addition to the PEAK Holding, PEAKnx offers innovative hardware and software components for contemporary building control. These include customised front end panels which supply homeowners with all smart home information at a central point. PEAKnx attaches great importance to a superior fusion between design and function in all its solutions.

The experts in home automation also provide related complementary services – from construction project planning and consultation through to installation and implementation by certified partners. PEAKnx aims to make everyday living safer and more comfortable for its customers while helping them to save costs. In doing so, the company is able to draw on the PEAK Holding's more than 20 years' experience. PEAKnx is also a premium sponsor for SV Darmstadt 98 and works together with the football club to provide support to social projects in the Darmstadt area.
