

Control **16**

User manual

Product	Item number
Control 16	PNX14-10001

This user manual contains the most important information for operating the Control 16 in a safe manner. Please study this manual carefully before using the device. This applies to all persons who come into contact with the device.

The product names mentioned in this document may be brands or registered trademarks of their respective owners. These are not explicitly labeled with “™” or “®”.

Date: 23.06.25

Warning symbols and signal words used in this manual

 Warning	Obey warning to avoid death or serious injury
 Caution	Obey instructions to avoid personal injury or damage to property
 Note	Instructions and facts to be followed
 Tip	Additional, useful hints

Important safety instructions, please read before installation!

 **Warning**

The device may carry dangerous voltages if improperly installed!

- Installation and commissioning may only be carried out by specially trained personnel (qualified electricians).

 **Caution**

Avoid damage to the panel!

- Only use the panel in perfect condition, as well as in accordance with its intended use, in a way that is safe and aware of the hazards and in compliance with this manual!
- Do not make any changes, attachments or conversions to the device without the manufacturer's permission!
- In particular, have faults that could impair safety immediately eliminated!
- To minimise the risk of burn-in and excessive heat generation, the screen of this device is configured to switch off automatically after a certain period of inactivity. This not only protects the screen, but also extends the overall lifespan of the device. Please note that this function helps to save energy and optimise the performance of the device. We recommend that you do not switch off the proximity sensor completely under Panel Settings (Control Micro / Control 12 / Control 16) and that you do not deactivate the screen switch-off function.

1 Target audience

These instructions are intended to explain basic aspects of the installation, commissioning, operation and maintenance of the Control 16. Depending on the using phase, this manual is aimed at other target groups:

Commissioning

- Installation and commissioning may only be carried out by qualified electricians and system integrators. Basic knowledge of electrical and KNX installation is assumed.

Operation

- The operation of the commissioned panel is explained for unskilled users.

Repair

- Under no circumstances carry out repairs to the unit yourself! If damage should occur to the device, please contact our technical support immediately, see *9.3 Technical support*.

2 Intended use

Depending on the software used, the Control 16 serves as control unit for the entire KNX installation across rooms. It thus also serves as a status display. The device must be operated within the scope of the technical data and instructions given in this manual. Keep the device away from moisture, dirt and dust to prevent damage to the device.

The following applications belong to the intended use:

- Use as an operating panel (input via touch) for KNX-controlled devices
- Intercom station for compatible door stations
 - A list of all compatible door stations can be found in our FAQ: www.peaknx.com/en/FAQ under the topic “compatibility”.
- Indoor operation, note the ambient conditions, see *9.3 Technical support*

The following applications are **not** part of the intended use:

- Operation in systems requiring special monitoring, in safety-relevant areas or in hazardous areas
- Operation under ambient conditions that do not comply with the specifications regarding temperature and air humidity. These include
 - Outdoor operation
 - Operation in direct sunlight
 - Operation in surroundings with high dust and dirt exposure
 - Operation in surroundings with high vibration exposure
- Operation in a moving environment (e.g. mobile homes)
- Operation in vessels

- Operation of the device by small children
- Unauthorized repairs or changes to the device

3 Product description

The Control 16 (short: panel) is a high-quality panel computer for wall mounting. It serves as a display and control unit for the KNX controlled components and installations of a building.

3.1 Software

The panel can be operated both with the supplied YOUVI software and with other Windows-compatible software.

Note: *PEAKnx provides no service and no warranty for software products from other companies as well as in case of OS driver updates.*

3.1.1 Operating system

The operating system used is Microsoft Windows IoT Enterprise LTSC. All components required for the unit to function have been pre-installed. To activate functions such as write protection, the supplied Tectool can be used. Further instructions and drivers can be downloaded from www.peaknx.com/downloads. Other programs for the visualisation of building information and for building control can be installed later.

3.1.2 Operation with the PEAKnx software YOUVI

The YOUVI Basic visualisation software included in the scope of delivery is used to control KNX devices such as sockets, switches, lights, dimmers, RGB lights, heaters, blinds, and shutters. Thanks to the IP router included in the software package, the panel can run YOUVI's visualisation without an external server or additional bus coupler. Only the connection to the IP network and the KNX bus (via the integrated KNX connection on the panel) is necessary. In addition to visualisation and IP router, a bus monitor is also included in the scope of delivery, which can record and filter the KNX traffic.

In addition to the basic functions for controlling KNX devices, YOUVI can be extended via modules for IP camera connection, creation of logics, control via app on the road or voice control. All current modules are available in the shop at www.peaknx.com > Shop > Software > YOUVI.

Note: *For the YOUVI installation, please pay special attention to the YOUVI quick reference guide and the information on KNX project preparation to enable the automatic reading of the project. This quick reference guide is included in the scope of delivery.*

For more information about YOUVI, see the YOUVI Help which you can access in YOUVI under the “?”-icon. Here, you will also find the current **range of functions** of the software under: *Visualisation > Scope of functions*.

3.1.3 Operation with third-party software

The Windows LTSC operating system pre-installed on the panel allows the use of other Windows-based software for e.g., visualisations and door intercoms. Depending on the software used, you can add more new functions to the panel. You will find a list of compatible software in the FAQs: www.peaknx.com/en/faq, topic “compatibility”.

Further instructions such as for setting up the panel as a door station can be found in the download area: <https://www.peaknx.com/de/downloads>.

3.2 Product features

- 15.6 inch LED backlit full color TFT display, 1920 x 1080 pixels
- Touchscreen, projected capacitive (PCAP)
- Integrated speakers and microphone
- Fieldbus connection for KNX
- 1000 Mbit-Ethernet connection, suitable standard for cabling: Cat-5 or higher
- Operating system: Windows IoT Enterprise LTSC
- No fan, thus silent
- Power supply: 24 V DC
- Power consumption
 - Peak load: 40 W
 - No load (display brightness = 50 %): 6 W
 - Server operation without LCD: 4 W
- Ambient temperature 0 to 35 °C
- Flush-mounted or surface-mounted wall installation, in landscape orientation
- Protection class IP20

3.3 Installation options

3.3.1 Flush-mounted version

3.3.2 Wall-mounted version

Position	Description	Position	Description
A1	Flush-mounted box	B1	Wall-mounted frame
A2	Panel	B2	Panel
A3	Glass cover	B3	Glass cover

3.4 Touch panel, front view

Position	Description	
C1	4 x intake for glass cover	
C2	Left: On/Off button, middle: activates status LED (C6), right: actuation > 5 s starts KNX reset	
C3	4 x slotted holes for fixing the panel	
C4	Microphone	
C5	side buttons	
C6	2 x USB 2.0	Status LED: <ul style="list-style-type: none"> ▪ Panel shut down: Status LED lights up permanently in red ▪ Panel booted: Status LED off, middle button (C2) pressed: LED lights up green ▪ Blue: KNX reset is being carried out
C7	Touchscreen	
C8	Windows Homebutton	
C9	Sensors: WLAN antenna, brightness sensor, proximity sensor and status LED	

3.5 Touch panel, rear view

Position	Description	
D1	1000 Mbit Ethernet port	
D2	KNX-Wago 243-211 installation terminal	
D3	USB C 3.2 Gen2	Status LED: <ul style="list-style-type: none">▪ Green: voltage in the correct range▪ Red: over- or undervoltage, remove the power supply!▪ Off: no voltage or connected with reverse polarity
D4	Panel power supply: 24 V DC, GND	

3.6 Notes on the panel's ports

3.6.1 KNX terminal

A terminal of the following specification is used for the KNX connection:

KNX WAGO 243 211, conductor diameter: 0.6-0.8 mm.

Note: *The KNX fieldbus can only be used with PEAKnx software.*

3.6.2 Power supply

The plug-in terminal for power supply has a usable wire cross-section of 0.75 to 1.31 mm².

Note: *Only use power supplies with a nominal voltage of 24 V DC to supply the unit. Higher voltages can cause damage to the unit.*

3.6.3 Ethernet port

Note: *A cable of category CAT5e or higher is recommended for using the 1000 Mbit LAN connection.*

3.6.4 Connections for external mouse and keyboard

There are two USB ports on the panel front under the glass cover, e.g. for using a USB wireless adapter for a cordless keyboard and mouse. There is also a USB-C 3.2 port on the back of the panel for fast data transfer to the panel.

3.7 Controls

Caution

Avoid danger of injury from falling parts!

- Ensure that small children cannot access to the magnetically adhering glass cover and cannot accidentally loosen it.

3.7.1 Graphical user interface

Touch the panel to operate. A brief touch of the panel is interpreted as a mouse click. A right mouse click is obtained by a prolonged touch (approx. 3 seconds).

Text entries can be made using the Windows on-screen keyboard. This can be found in the task bar at the bottom right. If not, refer to chapter 7.2 *Activating keyboard input*. If you swipe from the right side of the screen, you can also switch to tablet mode in the menu that appears so that the keyboard appears automatically when you type in a text box.

Caution

Avoid damage to front glass and display!

- Do not use the touch screen with sharp or pointed objects.

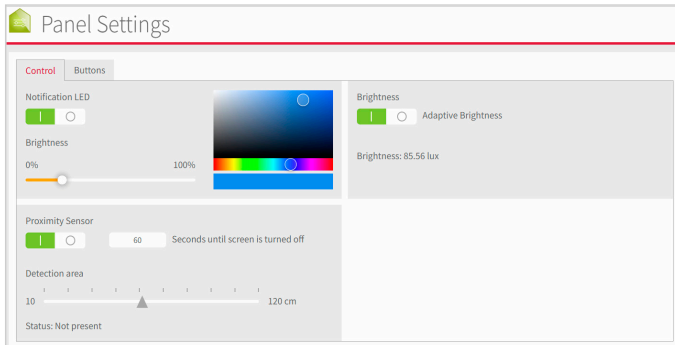

3.7.2 Control panel settings

You open the application by typing `http://localhost:31521/` into the panel's browser or using the icon in the taskbar:

Control

This tool gives you access to the brightness value, to the ambient light and the proximity sensor.

Buttons

The five side buttons on the right-hand side of the control panel display can be used to trigger various actions directly. The following function calls are supported:

- HTTP requests
- Device control commands
- Logic actions

Logic actions are defined and configured in the logic module under the „Actions“ menu. Device commands require that the relevant devices have previously been created in the Project Editor. Devices are only available as switching objects (e.g. on/off).

Panel Settings

Control **Buttons**

Side Buttons

1	HTTP	http://192.168.42.26:31227/api/triggers/http-trigger/23
2	Device	Philips Hue 1 on/off
3	Logic	Notification Lol; RGB DW2 Garage Color (224, 255, 4)
4	Device	RGB DW2 Garage
5	Device	RGB DW2 Office

Note: The configuration of function buttons for device and logic functions is only possible in combination with the YOUVI software. When using HTTP calls, please note that only function calls are supported - web page requests are not. These HTTP function calls can trigger corresponding actions on external systems, such as a Gira HomeServer.

4 Scope of delivery

- Control 16 panel
- USB flash drive: YOUVI Basic software package, Control 16 user manual
- Brief instructions for commissioning the panel and software
- Network connector
- Network patch cable

Optionally included in scope of delivery:

- Glass cover
- Flush-mounted box or surface-mounted frame
- Recovery USB flash drive
- Control 16 power supply unit for the switch cabinet (recommended) or flush-mounted box

5 Important safety and handling information

Warning

The panel may only be installed and commissioned by qualified electricians!

Warning

Observe the national regulations applicable in your country regarding installation, functional testing, repair, and maintenance of electrical products!

- Observe the “Five Safety Rules” (DIN VDE 0105, EN 50110) and apply them correctly:
 - Disconnect mains
 - Prevent reconnection
 - Test for absence of harmful voltages
 - Ground and short circuit
 - Cover or close off nearby live parts
- Before installation, make sure that all connecting cables of the device are undamaged.

Caution

Avoid overheating of important panel components!

- The panel may only be installed in landscape format and parallel to the wall to ensure ventilation of the computer in the panel by convection.

Caution

Removing the glass

- The glass must only be slid to the right to remove it. Do not tilt it under any circumstances.

6 Installation and start-up

The Control 16 can be mounted to the wall flush (flush-mounted box PNX14-10004), completely flush with the wall (with flush-mounted box and adapter frame PNX14-10006) and surface-mounted (surface-mounted frame PNX14-10005). Furthermore, it is possible to mount the Control 16 with a suitable adapter frame on various flush-mounted boxes of other manufacturers.

Further instructions for mounting the surface-mounted version or fixing with the help of adapters are supplied with the respective surface-mounted frame or adapter.

6.1 Preparation

Note: We recommend hedging the panel, since in rare cases the panel must be taken completely from the power supply, see section 9.1.2 Disconnecting the panel from the power supply.

Necessary accessories for the installation of the panel:

- Flush-mounted box (PNX14-10004) or surface-mounted frame (PNX14-10005)
 - Glass cover
 - Power supply unit 24 V DC for DIN rail (PNX12-10010) (recommended)
- or
- Power supply unit 24 V DC for the flush-mounted box (PNX12-10011)

6.2 Flush-mounted installation

Tip: Choose the installation height of the panel according to the height of the primary user so that the top edge of the panel is at his/her eye level. A slightly lower screen prevents fatigue of the arms during operation.

6.2.1 Installation in brickwork

1. Make a recess of H x W: 194 x 252 mm in the wall. Therefore, use the template provided. The flush-mounted box must later be flush with the plastered wall.
2. Depending on the cable position, press the circular plates at the top or bottom out of the

box and insert the supplied self-sealing grommets to prevent damage to the cable.

3. When inserting the flush-mounted box, route the supply and communication cables (Ethernet, KNX) through different holes in the flush-mounted box to avoid possible interference.
4. Use the template as a splash guard during the filling of the edges.

6.2.2 Installation in a cavity wall

1. Make a recess of H x W: 194 x 252 mm in the wall. Therefore, use the template supplied. The flush-mounted box must later be flush with the plastered wall.
2. Glue or screw the two wooden blocks supplied into the cavity wall.
3. Depending on the cable position, press the circular plates at the top or bottom out of the box and insert the supplied self-sealing grommets to prevent damage to the cable.
4. When inserting the flush-mounted box, route the supply and communication cables (Ethernet, KNX) through different holes in the flush-mounted box to avoid possible interference.
5. Screw the flush-mounted box on the sides to the wooden blocks using the four screws.
6. Use the template as a splash guard during the filling of the edges.

6.3 Connecting the power supply

Warning

Avoid electric shock when touching live parts!

- Disconnect all associated circuit breakers before working on the device.
- Cover live parts in the surroundings.

6.3.1 Prepare the voltage source for the DIN rail (recommended)

- Use a power source of the following specification:
 - 24 V DC, 2,5 A for the control cabinet, item number: PNX12-10010
- Connect the cable wires of the power supply unit with the pluggable screw terminal included in the scope of delivery. Please pay attention to the polarity.

6.3.2 Using a power supply unit in the flush-mounted box

Particularly, when replacing a foreign device with the Control 12, a power supply is often already present in the flush-mounted box. This means that mains voltage and low voltage are in the same housing and if connected incorrectly, even parts that normally only carry low voltage unintentionally may carry mains voltage.

Warning

Avoid touching dangerous voltages in the event of a fault!

- Installation may only be carried out by qualified electricians!
- Check that there is no voltage before starting work!
- Route cables so that low voltage wires are dependably protected against mains voltage.

1. Place the power supply unit (PNX12-10011) in the flush-mounted box.
2. Connect the 24 V side of the power supply unit with the plug-in screw terminal included in the scope of delivery. Please pay attention to the polarity.
3. Connect the mains cable to the 230 V side of the power supply unit.

4. Grounding

- When using a power supply unit in the **flush-mounted box of the Control 16:**
- Connect the grounding in the flush-mounted box. Use the supplied grounding set:

- When using a power supply unit in a **third-party flush-mounted box**:
- For this purpose, connect the earthing to the panel. Use the earthing set provided.

6.4 Connecting and mounting the panel

Preparation

- Place the screws (M3x12) included in the scope of delivery within reach for fixing the panel within the flush-mounted box.
- For further notes on the panel's ports, please read section 3.6 *Notes on the panel's ports*

Connection of the panel

5. Connect the Ethernet cable to the panel.
6. Plug the KNX cable with the colors red (+) and black (-) into the KNX-terminal, as indicated on the panel.
7. Push the prepared 24 V connector terminals into the appropriate connectors in the panel. Pay attention to the polarity.

Fastening the panel

8. Install the panel in the flush-mounted box. For doing so, use the four countersunk screws (M3x12) for fixing it in the slotted holes.
9. Place the glass cover with the magnetic holders into the four intakes provided and continue until the glass rests against all four corners of the touch screen.
10. Ensure that the opening for the camera is positioned on the upper screen.

7 Initial commissioning and operation

Caution

Avoid damage to the panel due to early commissioning!

- Note the climatic conditions at the installation site!
- Before switching on the mounted device, the device must have adapted to the climatic conditions at the installation site.
- Temperature and humidity differences can cause damage to the unit.

Tip: After commissioning and setting up the panel, we recommend that you create a backup using the optionally available recovery USB flash drive from PEAKnx. Further instructions can be found in the Quick Start Guide supplied with the USB flash drive.

Caution

Avoid damage to the glass cover and display!

- The touch-sensitive surface can easily be damaged! Use only your fingers or a touchpen to operate the panel. Do not use sharp or pointed objects.

7.1 Switching the Control 16 on and off

The Control 12 starts automatically after being connected to a power supply.

Note: In the delivery state, the panel automatically logs on with the user name **Control 12** without a password. After the Login, additional users can be added at any time or further settings may be changed in the Windows Settings.

Switching On

- Remove the glass cover: To do so, use both hands to take the glass cover on both sides and carefully pull the glass cover away from the panel towards yourself (magnetic mount).
- The On/Off-button is now accessible.
- Press the On/Off-button to switch on. The operating system will boot.

Switching Off

- Tap the Windows logo on the Windows Start screen, select the On/Off icon and select the option “Shut down”.

Note: *In normal operating conditions, it is not necessary to switch off the Control 16.*

7.2 Activating keyboard input

To automatically display the keyboard when tapping on a text input field, do the following:

- Swipe into the screen from the right and select “All settings”.
- Select “Devices” > “Typing”.
- Under “Touch keyboard”, check the last item: “Show the touch keyboard when not in tablet mode and there’s no keyboard attached.”

To display the keyboard icon in the taskbar:

- Right-click on the taskbar and select “Show touch keyboard button”.

7.3 Setting up the visualisation

After commissioning, set up the visualisation as described in the enclosed quick reference guide. It is assumed that all KNX actuators have already been parameterized via the ETS. The corresponding KNX project is then uploaded to *YOUVI Configuration > Projects*. At the end of the process make a backup of your configured visualisation.

Note: *For YOUVI installation, please pay special attention to the YOUVI quick reference guide and the information about KNX project preparation to enable the automatic import of the project. The quick reference guide is part of the delivery.*

8 Maintenance

8.1 Cleaning the touchscreen

By cleaning the touch surface, you prevent fingerprints or dust from impairing the touch function.

**Caution****Avoid damage to the glass cover and display!**

- Do not use harsh detergents, scouring agent, acids or organic solvents. Do not use any sharp objects for cleaning.
- Do not let any moisture get into the unit. Do not spray cleaning agents directly onto the surface of the touchscreen.

Removing the glass cover

- Use both hands to take the glass cover on both sides.
- Carefully pull the glass cover away from the panel towards yourself.

Switching on the cleaning mode

If you are using the supplied YOUVI visualisation, switch on the cleaning mode for cleaning.

Therefore, proceed as follows:

- In the YOUVI visualisation, switch to the settings.
- Tap on "Activate cleaning mode" in the upper left corner.

Now, active elements are deactivated for 20 seconds to prevent you from accidentally changing device values during cleaning.

Cleaning the touchscreen and the glass cover

- Clean the touchscreen with glass cleaner or one of the supplied cleaning cloths.
More cleaning cloths are available in the PEAKnx Shop.

Attaching the glass cover

- Place the glass cover with the magnetic mounts over the four intakes provided and lower the glass until it lies flat on all four corners of the touchscreen.
- Ensure that the hole for the camera is positioned on the upper screen.

9 Troubleshooting

If you have problems with the Control 16, please do not carry out repairs yourself, but contact your distributor. Opening the unit invalidates the warranty.

9.1 Touch panel stops responding

If the Control 16 no longer reacts to input on the touchscreen (which may occur in rare cases following Windows updates), try to reboot the panel, see chapter 9.1.1 *Turning the panel off and back on*. If the problem persists, disconnect the panel from the power supply, as shown in 9.1.2 *Disconnecting the panel from the power supply*, and restart it. If this does not solve the problem, please contact our technical support, see 9.3 *Technical support*.

9.1.1 Turning the panel off and back on

If the operating system cannot be shut down, the panel must be turned off manually and a reboot must be enforced.

Note: Any data that has not been saved might be lost when enforcing a restart.

Enforced restart

- Press and hold the On/Off button for more than 5 seconds.
The panel switches off.
After shutting down, leave the panel switched off for 10 seconds.
- Switch on the panel by pressing the On/Off button again.

9.1.2 Disconnecting the panel from the power supply

If the problem cannot be solved by restarting the panel, you must disconnect the panel from the power supply.

- Disconnect the circuit breaker of the panel in the building's control cabinet for at least one minute.

9.2 Windows has unrecoverable problems

If the Windows user interface shows unrecoverable problems, the operating system can be reset to factory settings.

Note: The restore process may take up to 30 minutes. During this time, the panel cannot be used for building control.

Each Control 16 is provided with an image for restoring the software to the state of delivery. To restore the panel to this state, proceed as follows:

Note: It is recommended to create a backup of the YOUVI server in *YOUVI Configuration > General > General* and a backup in the *YOUVI Visualisation > YOUVI Settings* before restoring the factory state. Save the backup to a separate storage medium.

- Type “Recovery” in the Windows search box and select the “Recovery Options”.
- Select the button “Restart Now” under “Advanced Startup”.
- You will be redirected to the “Advanced Startup” menu.
- Select “Troubleshoot”.
- Select “PEAKnx Factory Reset”.
- The factory state will be restored.

9.3 Technical support

If you experience problems with your Control 16, please contact our PEAKnx Support Team:

- Mail: support@peaknx.com
- Create a Support Ticket: <https://helpdesk.peaknx.com/>
- Phone: +49-6151-279 1825

10 Technical data

Supply	
Power supply specification	24 V DC; 2.5 A
Connecting terminal, conductor cross section	0.75 to 1.31 mm ² usable wire cross-section
Power consumption	Operation Idle (display brightness = 50%): 6 W Peak load: 40 W Server operation without LCD: 4 W

Computer system	
Processor	Intel Dual-Core, 11th generation, fanless cooling by convection
Memory (RAM)	8 GB LPDDR4
Hard drive	256 GB SSD
Operating system	Microsoft Windows IoT Enterprise LTSC

Subject to change without notice

Content changes in this documentation, which serve the technical progress, are made without prior notice. This documentation has been prepared with great care and will be revised at regular intervals. Nevertheless, we cannot guarantee complete accuracy. All known errors are eliminated in new editions. We are always grateful for any indication of errors in this documentation.

Conformity

Conformity is confirmed by the attached CE label. The considered standards can be found in chapter 9.3 *Technical support*.

You will find the complete declaration of conformity on the following page.

Disposal notes

Do not dispose of the old device in the household waste!

Observe the EU Directive 2012/19/EU on environmentally friendly disposal of used electrical/electronic equipment.

Waste of electrical and electronic equipment can

- contain hazardous substances that are harmful to health and the environment.
- contain valuable substances that are to be reused.

Therefore, do not dispose of with household waste.

Waste of electrical and electronic equipment can be returned to public collection points.

EU Declaration of Conformity

This declaration applies to the following product:

Product name: **Control 16**

Item number(s): **PNX14-10001**

Manufacturer: PEAKnx GmbH
Leydheckerstraße 10
64293 Darmstadt
Germany

CE We declare under our sole responsibility that the mentioned product is in conformity with the following directives and the affiliated harmonized standards:

EU Directive 2011/65/EU (RoHS 2) + 2015/863/EU (amended list of restricted substances)
